## ALIGNMENTS

Synergistic antiviral composition contains BFGF and sulphated
Typolysaccharide for treating viral infections e.g. HSV-1 and -2,
cytomegalovirus, HIV, influenza virus etc.

Disclosure; Page 4; 20pp; English.

This sequence represents acidic fibroblast growth factor (aFGF).

aFGF, or its fragments may be used in a synergistic compsn. with an antivirally acitive sulphated polysaccharide, and one or more excipients. The compsn. may be used to control herpes simplex virus (HSV-1 or -2) herpes varicella/zoster; cytomegalovirus; influenza; human respiratory syncytial virus; Semliki Forest virus; influenza; coloney Sarcome virus. The combination of aFGF with sulphated polysaccharide is found to have a greater antiviral activity than sequence 140 AA; 16-JAN-1993 (first entry)
Human acidic fibroblast growth factor.

Claim 2; Column 30; 25pp; English.

Cligonuclectides were synthesized on the basis of the amino acid sequence of bovinne acidic fibroblast growth factor (aFGF) and used to produce a synthetic gene (given in Q8823) incorporating codons preferred by E. coll or mammalian cells, unique cloning sites, etc. This synthetic gene was mutagenized to obtain a gene encoding a human recombinant aFGF (R74647) having activity
                                                                                                                                                                                                                                                                                                                    25-SEP-1995 (first entry)

CF mutein prepn. useful for therapy of burn or thrombosis - by transformation of lymphocyte-contained animal cell by vector contg. DNA encoding FGF mutein Disclosure; Page 3; 23pp; Japanese.
The invention covers muteins of FGF (esp. bFGF) which contain at least one glycosylation site. The muteins can be used to treat bu and thrombosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Š

Isolated, purified, biologically active bovine beta endothelial cell slowth factor - useful to regenerate or treat damaged blood vessels Disclosure; F19 8; 28pp: English.

Bovine beta endothelial cell growth factor (beta-ECGF; W0399) having a mol.wt. of 20 kD can be purified at least 16300 fold from bovine brain using heparin-Sepharose affinity chromatography. ECGF is useful for, among other purposes, diagnostic applications and has potential in the treatment of damaged blood vessels or other Human ECGF (737503) or fragments may be obtained using eligenucleotides (737504 to 737509) whose design is based on the sequence of bovine alpha- and beta-ECGF.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              63 QYLAMDIDGLLYGSQTPNEECLFLERLEEN-----HYNTYISKKHAEKNWFVGLKKNGSC 117

Cell growth promoter; mitogen; vascularisation; wound healing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Mitogenic polypetide isolated from human brain tissue - useful for increasing vascular effect in eg wound healing, or generating endothelial cell linings for vascular prostheses, etc. Claim 3; Page 1; 31pp; English.

The PF of the invention was obtd. from human brain tissue. It has a mol. wt. of 15,200-16,500 (pref. 15,61e-16,056) and has a high affinity for heparin. PFl and fragments are useful for promoting the growth of mesoderm-derived cells or neuroectoderm-derived cells and generating endothelial cell linings for vascular prostheses (all sequence 140 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  3 LPPGNYKKPKLLYCSNGGHFLRILPDGTVDGTRDRSDQHIQLQLSAESVGEVYIKSTETG 62

Tactor and protein as antigen.

Disclosure; Fig 1: 19pp: Japanese.

The was deduced from a gene used to produce recombinant argr.

The was deduced from the protein, esp. from A-D can be used to antigens to produce anti-argr antibodies. The peptides must comprise 8-10 continuous AAs from A or B (claims 5 and 6 resp.),

7-10 continuous AAs from C (claim 7), or 8-9 continuous AAs from D comparing argr.

                                                                                                                                                                                                                             Gene encoding human acidic fibroblast growth factor -
incorporates useful restriction sites at frequent intervals to
facilitate cassette mutagenesis of specified regions.

Claim 2; Fig 3a; 12pp; English.

The synthetic aFGF gene incorporates useful restriction sites at
frequent intervals to facilitate the cassette mutagenesis of
frequent intervals to facilitate the cassette mutagenesis of
the incorporation of the gene into any expression system

The aFGF mol. acts in a cascade effect to control endothelial cell
activity either co-ordinately through synergistic effects or via
independent routes. The regulation of endothelial cells is essential
for the protection of arteries, veins and capillaries from the effect
of thrombogenesis. Their stimulation and control by these factors is
also thought to be important in the development of tumours and

ncodes a
peptide
DNA encoding a cleavable signal peptide and an endothelial cell growth factor - useful for producing recombinant endothelial cell growth factor proteins (1990) and the state of the state 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ij
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         isolated, purified, biologically active bovine beta endothelial cell growth factor. - useful to regenerate or treat damaged blood vessels bisclosure; Fig. 8: 28pp: English and the beta endothelial cell growth factor (beta-ECGF; W03999) having a mol.wt. of 20 kD can be purified at least 16300 fold from bovine brain using heparin-Sepharose affinity chromatography. ECGF is useful for, among other purposes, diagnostic applications and has potential in the treatment of damaged blood vessels or other Human ECGF (137503) or fragments may be obtained using oligonucleotides (137504 and 137508 to 137508 to 137509) whose design is based on the sequence of bovine alpha- and beta-ECGF.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             98 QYLAMDTDGLLYGSQTPNEECLFLERLEENATPAPHYNTYISKKHAEKNWFVGLKKNGSC 157

Claim 1; Column 16; 23pp; English.

This sequence represents the amino acid sequence of the mature human beta-endothelial cell growth factor (b-EGF). This amino acid sequence is identical to the alpha-EGF but the beta sequence contains an extra 20 N-terminal amino acids. The sequence was isolated from a human brain stem cell cDNA library using a probe designed based on fragments of the bovine ECGF (see W75416-W75418). The ECGF protein can be used in compositions for promoting wound healing. ECGF is also used to grow cells on a prosthetic device.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   QYLAMDTDGLLYGSQTPNEECLFLERLEEN-----HYNTYISKKHAEKNWFVGLKKNGSC 131

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Adamaged blood vessels, etc.
Claim 1; Column 16: 22pp: English.
Human recombinant endothelial cell growth factors (ECGF) beta
Human recombinant endothelial cell growth factors (ECGF) beta
(W06816) and alpha (W06817) differ only at their N-terminal ends.
They can be produced in transformed prokaryotic or eukaryotic host
cells using DNA sequences (145983 and 145984), respectively) derived
from the complete human ECGF CDNA (745985). Large quantities of
the ECGFs are produced by culturing the host cells and recovering
the proteins. ECGFs have utility in the growth and amplification
of endothelial cells in culture. They can potentially be used to
treat damaged blood vessels and other endothelial cell-lined
structures, and also have diagnostic applins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  38 LLDANYKKPKLLYCSNGGHFLRILPDGTVDGTRDRSDQHIQLQLSAESVGEVYIKSTETG 97

                                                                                                                           FGF-1.

FGF-1, fibroblast growth factor; cytotoxic conjugate; fusion protein; saporin; cytostatic; tumor; diabetes; rheumatoid arthritis.

Homo sapiens.
                                                                                                                                                                                                                                                                                                                                                                              Disclosure; Page 108-109; 128pp; English.

Novel fusion proteins comprise FGF linked to saporin. FGF-1 to -9
may be used, pref. FGF-1 (R70812), FGF-5 (R70813), FGF-7 (R70814) or
FGF-8 (R70815) muteins, in which at least 1 Cys residue is replaced
by conservative Ser substitutions. The fusion proteins are potent
sequence 155 AA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   LPPGNYKKPKLLYCSNGGHFLRILPDGTVDGTRDRSDQHIQLQLSAESVGEVYIKSTETG 77

                                                                                                                                                                                                                                                                                                   National and other and continued by recombinant DNA techniques, useful for wound healing Example; Fig 8: 43pp; English.

Example; Fig 8: 43pp; English.

Example; Fig 8: 43pp; English.

To screen the human brain stem cDNA library for clones contg. ECGF inserts, a specific obligance leading was designed. This colligance leading and provided was based upon a partial AA sequence analysis of the amino terminus of ECGF (see F70440 and P70481). Fig 3c sets bovine alpha and beta ECGF (P70834). The two clones that were isolated, ECGF clones 1 and 29, were analysed in further detail. The nucleotide sequence of these clones and the AA sequence deduced from Sequence 155 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      18 LPPGNYKKPKLLYCSNGGHFLRILPDGTVDGTRDRSDQHIQLQLSAESVGEVYIKSTETG 77

Mean 43.414; Variance 75.912; scale 0.572 Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

TITLE	acidic fibroblast growth factor 1 precursor - human
ALTERNATE_NAMES	<pre>beta-ECGF; endothelial cell growth factor beta; heparin-binding growth factor 1</pre>
ORGANISM	#formal name Homo sapiens #common name man
DATE	10-Sep-1999 #sequence_revision 10-Sep-1999 #text_change
ACCESSIONS	A3365; A32316; S18217; A43804; A24662; JH0707; S35535; S35536; I39413; A23553; A24820; A24243; A24301; A26386; A53639

Isolation and partial characterization of an endothelial cell growth factor from the bovine kidney: homology with basic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The acidic and basic fibroblast growth factors are the major.

The acidic and basic fibroblast growth factors are the major endotherlail-cell growth factors. Both are angiogenic agents in vivo and are potent mitogens for a variety of mesoderm-derived cell types in vitro (although bFGF is 30-100 times more potent than aFGF in stimulating the proliferation of normal diploid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    protein binds heparin more strongly than does aFGF. #superfamily fibroblast growth factor alternative splicing; anglogenesis; growth factor; heparin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         #product basic fibroblast growth factor, uterine form
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             71 RGVVSIKGVCANRYLAMKEDGRLLASKCVIDECFFFERLESN-----NYNTYRSRKYS-- 123
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      11 LPALPEDGGSGAFPPGHFKDPKRLYCKNGGFFLRIHPDGRVDGVREKSDPHIKLQLQAEE 70

Variance 68.487; scale 0.646 Mean 44.269; Statistics: Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

J. Biol. Chem. 271:30263-30271(1996).
-!-FUNCTION: THE HEPARIN-BINDING GROWTH FACTORS ARE ANGIGGENIC AGENT IN VIVO AND ARE POTERY MITOGENS FOR A VARIETY OF CELL TYPES IN VITRO. THERE ARE DIFFERENCES IN THE TISSUE DISTRIBUTION AND CONCENTRATION OF THESE 2 GROWTH FACTORS.
-!-SUBUNIT: MONOMER.
-!-SIMILARITY: BELONGS TO THE HEPARIN-BINDING GROWTH FACTORS FAMILY.
                                                                                                                                                                                                                                                                                       FGF1 OR FGF-1 OR FGFA.
